AKIB/

Self extinguishing cigarette stub - has glowing stub removed and inserted in sleeve around filter tip

M AKIBA 22.09.73-JA-U11307
P15 (03.04.75) A24d-01/10

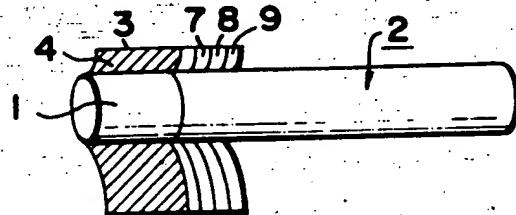

A self extinguishing cigarette has a sleeve around its filter tip, which projects beyond the filter tip to form a socket for the end of the cigarette. This sleeve is of aluminum foil or non-burning paper, and when the cigarette has nearly burnt away, the stub can be extracted, reversed and the glowing end inserted in the socket. The sleeve carries an internal coating of a substance which extinguishes the cigarette, and also carries a ring of adhesive which is activated by the heat to retain the stub. In another design, the wrapping paper carries a layer of silicon or teflon which covers the region which overlaps the cigarette stub.
